

ABOUT ME

I'm a full-stack web application developer, based in Atlanta, Georgia, with 15 years of experience. I'm looking for a fully remote, full-stack, senior level position, with ideally more frontend work than backend.

The first part of my career I worked for a Medical software company. Mostly as part of a very small team, with many different responsibilities, before spending my last couple of years there on a larger more formalized team. The last 7 years I've worked for a Field Services software company, doing both front and backend work on the in-office Dispatcher web application, in addition to multiple backend integrations. Again, starting on a small and informal team, as the company has grown, duties, responsibilities, and practices have become more formalized. Please visit my website, www.ixeldog.com, for an interactive resume with more information, and <https://github.com/ixeldog/resume2024> to see the code behind the website.

FRONTEND SKILLS

- Vue 2
- React 15
- JavaScript/TypeScript
- Angular 17
- HTML/CSS/SASS
- NPM/Webpack

BACKEND SKILLS

- C#
- SQL
- SQL Server
- Java
- Cosmos DB
- Oracle

EXPERIENCE

FieldEdge

2017 - Current

Primary responsibilities were extending and maintaining FieldEdge Web, a web application using SQL Server, C#, and Knockout JS frontend library. Migration from Knockout to Vue 2 is almost complete. I also worked on integrations for payments (Clearent and Payroc), electronic signatures (DocuSign), and proposals and live costs (Enterprise Selling Solutions).

Surgical Information Systems

2009 - 2017

Spent most of my time working on a patient tracking application: Oracle DB, Java backend, Flash displays, with a HTML/JavaScript/CSS admin portal.

The last couple years there I worked on rewriting an existing application for the Cloud: SQL Server DB, C# backend, and Angular JavaScript framework.

EDUCATION

B.S. Computer Science | Southern Polytechnic State University

Graduation Fall 2008
